SUBJECT INDEX

ASHRAE standard on requirements for infrared survey, update on proposed, 148
(ASTM) procedures on use of infrared (IR) imaging devices for building diagnostics, evolving American Society for Testing and Materials, 154
Acquisition techniques, airborne data, 161
Acquisition training techniques, 159
Aerial thermograms for large scale energy audits, computer reduction of, 41
Aerial thermographs, interpretation of, 30
Aerial thermography, quantifying heat losses using, 91
Airborne data acquisition techniques, 161
American Society for Testing and Materials (ASTM) procedures on use of infrared (IR) imaging devices for building diagnostics, evolving, 154
Analysis using infrared scanning techniques, solar collector systems, 208
Application of infrared techniques in the energy management of Woodstock Union High School in Woodstock, Vermont, 144
Areas, measuring building R-values for large, 137
Audits, computer reduction of aerial thermograms for large scale energy, 41
Audits, roles for thermography in utility company residential energy, 36

Building diagnostics, evolving American Society for Testing and Materials (ASTM) procedures on use of infrared (IR) imaging devices for, 154
Building enclosure deficiencies in Canadian public buildings, thermographic interpretation of, 121
Building heat loss, interpretation of thermographic data for the identification of, 24
Building R-values for large areas, measuring, 137
Building thermal envelope, isolating the, 50
Building thermography in a subtropical environment, low resolution infrared, 139
Buildings, infrared thermography assists in identifying heat losses in school, 118
Buildings using infrared thermography, detecting moisture in, 111
Buying thermography, 186

Canadian experience in certification and training of thermography personnel, 169
Canadian public buildings, thermographic interpretation of building enclosure deficiencies in, 121
Certification and training of thermography personnel, Canadian experience in, 169
Collector systems analysis using infrared scanning techniques, solar, 208
Commercial/industrial heat loss, 104
Computer reduction of aerial thermograms for large scale energy audits, 41

Data acquisition techniques, airborne, 161
Deficiencies in Canadian public buildings, thermographic interpretation of building enclosure, 121
Detecting moisture in buildings using infrared thermography, 111
Diagnostics, evolving American Society for Testing and Materials (ASTM) procedures on use of infrared (IR) imaging devices for building, 154
Dwelling retrofits, Swedish experiences in the application of thermography for establishing priorities and quality control in residential, 77
Dwellings, thermographic study of transient heat-flow in residential, 63

Enclosure deficiencies in Canadian public buildings, thermographic interpretation of building, 121
Energy audits, computer reduction of aerial thermograms for large scale, 41
Energy audits, roles for thermography in utility company residential, 36

Energy conservation program, infrared thermography in a residential, 38
Energy management of Woodstock Union High School in Woodstock, Vermont, application of infrared techniques in the, 144
Envelope, isolating the building thermal, 50
Environment, low resolution infrared building thermography in a subtropical, 139
Evolution of infrared instrumentation, 197
Evolving American Society for Testing and Materials (ASTM) procedures on use of infrared (IR) imaging devices for building diagnostics, 154

Federal and state programs, overview of, 203
Flow in structures, heat, 9

Heat flow in structures, 9
Heat flow in residential dwellings, thermographic study of transient, 63
Heat loss, commercial/industrial, 104
Heat loss, interpretation of thermographic data for the identification of building, 24
Heat losses in school buildings, infrared thermography assists in identifying, 118
Heat losses using aerial thermography, quantifying, 91
High resolution infrared imaging system, practical applications using a, 57

(IR) imaging devices for building diagnostics, evolving American Society for Testing and Materials (ASTM) procedures on use of infrared, 154
Identification of building heat loss, interpretation of thermographic data for the, 24
Imaging devices for building diagnostics, evolving American Society for Testing and Materials (ASTM) procedures on use of infrared (IR), 154
Imaging system, practical applications using a high resolution infrared, 57
Implementation of standards, 167
Infrared building thermography in a subtropical environment, low resolution, 139
Infrared imaging system, practical applications using a high resolution, 57
Infrared instrumentation, evolution of, 197
Infrared (IR) imaging devices for building diagnostics, evolving American Society for Testing and Materials (ASTM) procedures on use of, 154
Infrared measurements, meteorology and, 21
Infrared scanning techniques, solar collector systems analysis using, 208
Infrared surveys, update on proposed ASHRAE standard on requirements for, 148
Infrared techniques in the energy management of Woodstock Union High School in Woodstock, Vermont, application of, 144
Infrared technology and public schools: applications in Berlin, New Hampshire, 106
Infrared thermal sensing and how we use it, 2
Infrared thermography assists in identifying heat losses in school buildings, 118
Infrared thermography, detecting moisture in buildings using, 111
Infrared thermography in a residential energy conservation program, 38
Industrial heat loss, commercial/, 104
Instrumentation, evolution of infrared, 197
Interpretation of aerial thermographs, 30
Interpretation of building enclosure deficiencies in Canadian public buildings, thermographic, 121
Interpretation of thermographic data for the identification of building heat loss, 24
Isolating the building thermal envelope, 50

Large areas, measuring building R-values for, 137
Large scale energy audits, computer reduction of aerial thermograms for, 41
Loss, commercial/industrial heat, 104
Losses in school buildings, infrared thermography assists in identifying heat, 118
Losses using aerial thermography, quantifying heat, 91
Low resolution infrared building thermography in a subtropical environment, 139

Management of Woodstock Union High School in Woodstock, Vermont, application of infrared techniques in the energy, 144
Measuring building R-values for large areas, 137
Meteorology and infrared measurements, 21
Moisture in buildings using infrared thermography, detecting, 111

Overview of federal and state programs, 203

Personnel, Canadian experience in certification and training of thermography, 169
Practical applications using a high resolution infrared imaging system, 57
Priorities and quality control in residential dwelling retrofits, Swedish experiences in the application of thermography for establishing, 77
Procedures on use of infrared (IR) imaging devices for building diagnostics, evolving American Society for Testing and Materials (ASTM), 154
Programs, overview of federal and state, 203
Public buildings, thermographic interpretation of building enclosure deficiencies in Canadian, 121
Public schools: applications in Berlin, New Hampshire, infrared technology and, 106

Quality control in residential dwelling retrofits, Swedish experiences in the application of thermography for establishing priorities and, 77
Quantifying heat losses using aerial thermography, 91

R-values for large areas, measuring building, 137
Reduction of aerial thermograms for large scale energy audits, computer, 41
Residential dwelling retrofits, Swedish experiences in the application of thermography for establishing priorities and quality control in, 77
Residential dwellings, thermographic study of transient heat-flow in, 63
Residential energy audits, roles for thermography in utility company, 36
Residential energy conservation program, infrared thermography in a, 38
Resolution infrared building thermography in a subtropical environment, low, 139
Resolution infrared imaging system, practical applications using a high, 57
Retrofits, Swedish experiences in the application of thermography for establishing priorities and quality control in residential dwelling, 77
Roles for thermography in utility company residential energy audits, 36

Scale energy audits, computer reduction of aerial thermograms for large, 41
Scanning techniques, solar collector systems analysis using infrared, 208
School buildings, infrared thermography assists in identifying heat losses in, 118
Schools: applications in Berlin, New Hampshire, infrared technology and public, 106
Sensing and how we use it, infrared thermal, 2
Society for Testing and Materials (ASTM) procedures on use of infrared (IR) imaging devices for building diagnostics, evolving American, 154

Solar collector systems analysis using infrared scanning techniques, 208
Standard on requirements for infrared surveys, update on proposed ASHRAE, 148
Standards, implementation of, 167
State programs, overview of federal and, 203
Structures, heat flow in, 9
Subtropical environment, low resolution infrared building thermography in a, 139
Swedish experiences in the application of thermography for establishing priorities and quality control in residential dwelling retrofits, 77
Systems analysis using infrared scanning techniques, solar collector, 208

Techniques, solar collector systems analysis using infrared scanning, 208
Technology and public schools: applications in Berlin, New Hampshire, infrared, 106
Thermal envelope, isolating the building, 50
Thermal sensing and how we use it, infrared, 2
Thermograms for large scale energy audits, computer reduction of aerial, 41
Thermographic data for the identification of building heat loss, interpretation of, 24
Thermographic interpretation of building enclosure deficiencies in Canadian public buildings, 121
Thermographic study of transient heat-flow in residential dwellings, 63
Thermographs, interpretation of aerial, 30
Thermography assists in identifying heat losses in school buildings, infrared, 118
Thermography, buying, 186
Thermography, detecting moisture in buildings using infrared, 111
Thermography for establishing priorities and quality control in residential dwelling retrofits, Swedish experiences in the application of, 77
Thermography personnel, Canadian experience in certification and training of, 169
Thermography, quantifying heat losses using aerial, 91
Thermography in a residential energy conservation program, infrared, 38
Thermography in a subtropical environment, low resolution infrared building, 139
Thermography in utility company residential energy audits, roles for, 36
Training techniques, acquisition, 159
Training of thermography personnel, Canadian experience in certification and, 169
Transient heat-flow in residential dwellings, thermographic study of, 63

Update on proposed ASHRAE standard on requirements for infrared surveys, 148
Utility company residential energy audits, roles for thermography in, 36

Vermont, application of infrared techniques in the energy management of Woodstock Union High School in Woodstock, 144

Woodstock Union High School in Woodstock, Vermont, application of infrared techniques in the energy management of, 144
Woodstock, Vermont, application of infrared techniques in the energy management of Woodstock Union High School in, 144
